

# Mac Evaluation Utility Workshop

## Easily assess your Mac environment

Looking to understand if your organization is ready to adopt Mac using Apple's best practices? Mac Evaluation Utility makes it easy to securely and privately assess your environment.

The Mac Evaluation Utility app delivers a customized report with hundreds of attributes that provides valuable insights and analysis about your Mac deployment process, including what's working well and areas for improvement. Example attributes include whether or not features like Gatekeeper and FileVault are deployed correctly, as well as ensuring that your network can communicate successfully with a variety of different Apple hosts and servers.

Once you run the app and assess your environment, you can collaborate Compugen's Apple experts to understand the report's data and build a plan for deployment success. And if you don't have access to AppleSeed for IT to download and run the app yourself, your reseller can help get it up and running on your system.

It's created by Apple. Mac Evaluation Utility was developed based on years of working with enterprise customers who deploy Mac at scale using Apple best practices.

No changes occur on your Mac. The app is designed to only deliver observational data through a report, without making any system modifications. Nothing will be altered on your Mac after it has been run.

It's secure and private. The app is code signed and verified with a certificate from Apple. This means that it's a trusted application that will not run if it has been modified. The report and all of its contents are for your eyes only.

If you participate in AppleSeed for IT, you can download and run the Mac Evaluation Utility app on your own, then work with our team to interpret the results and get help with Apple best practices. See [AppleSeed for IT](#) for more information about the program

# Get the support you need implementing Apple Best Practices

Mac Evaluation Utility is a great tool if your organization already uses iPhone and iPad, is interested in offering Mac as a choice on a wider scale and wants to take advantage of Apple management tools like mobile device management (MDM) and Apple Business Manager.

Since the utility will assess different network settings and user experiences, it's recommended that you test a Mac that best represents a current company user—and run it on different networks, including your corporate network, a VPN, and from remote locations. This will gauge Mac readiness across the company—and in different locations—so you can rest assured that your employees can work from anywhere, anytime.

## Get started today

It's easy to gain invaluable insights about your Mac environment by engaging Compugen. As a trusted advisor, we can help to review the app's resulting report, while providing expertise and advice every step of the way. During our workshop together you will:

- Gain access to the Mac Evaluation Utility app so that you can run it.
- Review, assess, and understand the results.
- Determine how to best leverage different Apple services and technologies.
- Discuss next steps for ensuring a successful Mac deployment.
- Make sure that you're following recommended Apple best practices.

If you're ready to move forward and deploy Mac at scale, then now's the time to take advantage of the Mac Evaluation Utility app. By working alongside our team of experts, we can chart a successful path to ensure that your organization is ready and able to adopt Mac
