Managed Azure

Realizing the potential of cloud with an expertly managed, cost optimized Azure environment.

Many organizations understand the efficiency, agility and scalability the cloud can provide but having a holistic view and effectively managing an Azure environment can be challenging. Many organizations have not yet realized the full potential a well-managed Azure environment can deliver. That's a shame, given the impact it can have.

For organizations that need an optimized cloud or hybrid cloud environment and want the peace of mind of a skilled and highly experienced partner to deliver it, we present Compugen's *Managed Azure*. Effective cloud management involves far more than management of the technology itself. We use a unique collection of advanced tools and processes and align with the Microsoft Cloud Adoption Framework. Then, we carefully monitor and optimize your system software and infrastructure to effectively manage production cloud workloads.

Business Support

One of the most common concerns about cloud is the cost: keeping it under control and allocating resources where they will have the most impact, while also closely monitoring to make sure that as your business changes, your cloud usage adapts accordingly. While there are many elements effectively supporting your Azure environment, cost management and governance are the areas where most organizations struggle. Our team of highly skilled Azure specialists understand the challenges and will guide you with insight on effective management, along with performance optimization of the environment.

Inventory and Visibility

Having insight into what is managed — your inventory — and how that inventory changes over time — your visibility — is key to a healthy cloud environment. We'll provide you with tools and methodologies that give you the transparency and information you need to adjust your design and usage accordingly, while ensuring optimal health and performance of your Azure environment.

Operational Compliance

Poor governance, configuration drift and improper patching all increase the likelihood of system outages. A fully automated policy-based environment maintains its desired state through pre-programmed blueprints and templates that clearly define configuration and control change management.

Protection and Recovery

The defined blueprints are also essential to reduce the duration and impact of unpreventable outages. We will work with you to map out system criticality and apply the appropriate policies and procedures to ensure your business can quickly recover whenever an outage may occur.

Operations Management & Technical Support

We know from firsthand experience that adherence to ITIL, when combined with the Microsoft Cloud Adoption Framework, leads to higher service standards, improved communication and increased adoption of best practices in your organization. Marrying these two best-in-class frameworks, combined with Compugen's support and expertise, gives you power and control over your domain and a future-proof environment.
