

Modern Workspace Assessment

SERVICES BY COMPUGEN

COMPUGEN
Simplifying the business of technology . . . together

Leverage your technology for more productive and effective collaboration

Today's workspace isn't limited by location. When your team has the freedom to work from home or the office the opportunities expand. Work/life balance and the ability to hire the right skillset in a remote location can mean incredible things for your business. The challenge? To deliver the seamless, secure office-like experience with full support and adequate bandwidth to your staff working from home.

Providing the tools (hardware, software, access) is the obvious first step; ensuring you have visibility to the touchpoints required for effective support and management (network, security and cloud) is the even more important second step. And with the added pressure many feel from the accelerated move from office to hybrid home/office workspaces, the process can be expensive, time-consuming and somewhat overwhelming. But it doesn't have to be. Embracing the opportunity a hybrid home/office model brings is worth the effort. Compugen can help.

Realizing your modern workspace goals

Through Compugen's Modern Workspace Assessment you'll be able to realize your vision, by gaining an understanding of potential roadblocks and challenges, as well as a plan to help you prioritize next steps – all while staying within budget.

Our team of experts will work with you to develop a tailored, unified roadmap to help your organization realize your modern workspace goals. Leveraging our well-defined methodology of interactive workshops,

expert hands-on analysis and data collection, we'll partner with you to simplify the approach and examine your environment for any or all of the six different disciplines, based on what makes sense for your business:

- 1. Modern desktop and keeping current** – assess the ability and efficiency of Windows image(s) to meet your staff's requirements no matter where they're located, and provide guidance for adopting best practices to secure data and protect privacy.
- 2. Digital workspace** – review of cloud-first (private, public or hybrid) productivity enhancement capabilities to enhance flexibility and agility.
- 3. Collaboration and voice** – examine your existing governance and telephony system to determine suitability of integrated collaboration and voice solutions for your organization.
- 4. Messaging and productivity** – assess secure messaging and productivity tools to provide flexible and simplified access to all staff.
- 5. Productivity and security** – security-focused analysis of your productivity platform and recommendations to keep you on track for a secure strategy that's easy to manage.
- 6. Endpoint Management** – review the ecosystem of your Apple and Android devices to enable enterprise-wide administration.

We'll assess technologies including various end-user devices, and platforms by Microsoft (M365, Windows Virtual Desktop, Azure services), Citrix, VMware, Trend Micro, Ivanti, F5, Apple, IGEL, Dell, HP, Lenovo, Cisco and Aruba.

Post-assessment you'll have a clear path – with budget and timeline estimates – to the optimized digital workspace you desire: one that moves you toward your business goals, while improving the environment for your staff and helping you achieve tangible cost savings. No matter what your current state, Compugen can help you realize your ideal modern workspace, without the stress or heavy lift required to do it alone.

Why Compugen

Compugen's highly skilled Modern Workspace experts bring long-standing, deep, vendor partnerships strengthened through the highest level of certifications for each of the technologies we touch. Combined with a commitment to training and development and a depth of experience, we're passionate about delivering unique solutions that improve customers' modern workspaces.
